Duration

20 hours

Title: Create user requirement document, storyboard and use case diagrams

Tools, Equipment and Materials:

- 1 Computer with Internet access
- 2 Cloud based diagram design tool e.g. Creately or Lucidchart

Instructions:

1. Form group of 2-3 students, brainstorm and propose a software application idea to solve a real-life problem.
2. Draft a proposal for the application. Define the problem statements and possible solutions.
3. Gather user requirements via survey/interview.
 - a. Design survey questionnaire with at least 12 relevant questions for requirements gathering. The questions include:
 - i. Functional requirements (8-10 questions)
 - ii. Non-Functional requirements (2-4 questions)
 - b. Conduct survey and/or interview with at least 20 users.
 - c. Conduct data analysis on the survey/interview result.
4. Produce user requirements document (URD) which meets the objectives of the software application.
 - a. URD should include survey results
 - b. URD should include at least 4 mandatory requirements
 - c. URD should include at least 2 of the following requirements
 - i. desirable requirement
 - ii. optional requirement
 - iii. possible future enhancement
5. Create storyboard design of the software application according to user requirements.
 - a. Identify at least one primary user (e.g. customer) and one secondary user (e.g. administrator).
 - b. Choose one of the problems the primary user faces and illustrate the problem with a detail storyboard.
 - c. Draw brief storyboard(s) to illustrate the problems faced by the secondary user.
 - d. Use the storyboards to design UX/UI in detail to illustrate the flow of the application, highlight how the design will fulfil the 4 mandatory requirements in 4(b).
6. Document at least 4 use cases for each of the mandatory requirements in 4(b).
7. Create UML use case diagram(s) based on the documented use cases in item 6.
8. Present the project with PowerPoint slides.

Module Code

IT43001FP

Duration

20 hours

First Submission

1. Software application proposal
2. Survey questionnaire

Final Submission

1. User requirements document (URD)
2. Storyboards
 - a. Detail storyboard for a primary user
 - b. Brief storyboard(s) for a secondary user
 - c. UX/UI design for the software application
3. Use cases and use case diagrams
4. Presentation slides
